

IS THE CONTENTION THAT YOUNG EOD'ing JOT'S ARE MORE
LIKELY TO QUIT THAN OLDER ONES
JUSTIFIED??

The following chart was prepared as part of a plan to see if the above contention is borne out by facts. The figures resulting should be compared with the TOTAL number of JOT'S TAKEN IN in the 1956-63 period, by similar age groups.

IE, there were only five 23-year-old resignees 1956-63; there were 19 26-year-old ones. If we know the total number of JOT'S taken in at each age level during the period, we can compare, on a percentage basis, the number of drop-outs, or rather the rate of same.

The number of dropouts at each age is known, lacking is the number of JOT'S remaining in the Agency, as of 1963, in each age group. Adding # remaining to # of dropouts would give the total.

The number remaining can be hand-categorized, on a similar chart to the one following, from the "JOT Master Listing

Updated

As of 31 December 1963"

25X1A9a

which Mr. [REDACTED] has.

The JOT office apparently does not have records of the EOD ages of its classes.

This project, if done in conjunction with others in the JOT field, could either collect data for those others or use the age, etc., data already collected.

NOTE: This survey should deal only with non-female, non-military, non-internal JOT's. JOT's who EOD'd into the JOT program at less than GS-7 were also eliminated from the chart which follows on dropouts.

Note on the accompanying chart

This chart covers JOT's who EOD'd in the JOT program from 1956-1963 inclusive: a period of 8 years.

It covers only non-internal, non-military males. Internals' retention has been examined already (it is very high), military retention also (it is too low, and the military program is for all practical purposes now discontinued), and female retention (also very low, but LBY likes 'em, so we'll keep getting -- or gittin' -- 'em).

There were 78 total "dropouts" as of 31 Dec. 1963 among the 1956-63 JOT's. The left margin is age at EOD into the JOT program (not into the Agency). The top margin is the minimum time spent in the Agency after acceptance and beginning of JOT training.

The little hash marks in the boxes was the counting as the records were gone through.
